

## about US

Rikett's mission as a flooring manufacturer is to offer the best quality products at the most competitive prices so it can deliver flooring to its clients with the perfect balance of value, design and performance in a pleasing customer experience that will last a long time.

In 1952 Rieber & Sons founded Rikett® in Bergen, Norway to manufacture Quartz Tile. Rikett invented Rikett Quartz Tile, (RQT), as an alternative to homogeneous tiles using asbestos and carbonites. During the 1950's, an enlightened environmental vision enabled Rikett to replace the harmful chemical asbestos with Quartz, a safe and abundant natural mineral. The new Rikett Quartz Tile was, and still is, vastly superior in strength, flexibility, and performance to all other composition floor tiles. For over 70 years, Rikett has successfully manufactured and sold over 2.5 billion square feet of quartz tile worldwide. Rikett launched RQT in the US market in 1999.

Rikett America, (City of Industry, CA) and Rikett Asia Holding, Ltd., (Hong Kong), maintain a deeply interconnected relationship. These two corporate entities are operationally linked, showcasing a strong and enduring partnership that transcends geographic boundaries. Each act as a distinct reflection of the other in their respective markets, while adhering to a cohesive, unified global business approach. They strategize the growth of their business, setting shared objectives, and synchronizing operations to ensure seamless business operations across both continents.

Rikett operates multiple processing plants equipped with a diverse range of tile and sheet production lines. In 2012 Rikett invested in upgrading its manufacturing plants to improve the quality of its quartz flooring products. It added a state-of-the-art chip dispersion lines and equipment to apply Rikettseal™ PUR coating technology, which allows Rikett Quartz Tiles to be easily cleaned and economically maintained for many years. Rikett Quartz products come with a 20-year limited commercial wear through warranty.

Rikett's production facilities take pride in the manufacture of a premier homogeneous product, a top contender predominantly in the Asian market.

Rikett's manufacturing facilities are ISO 14001, (Environmental) and ISO 9001, (Quality), certified. Rikett builds fully sustainable flooring products. It does not use any unknown recycled content, which may contain hazardous chemicals. Rikett's flooring does not contain Ortho-Phthalates, Formaldehyde, or harmful chemicals. RQT are 3rd party certified to meet or exceed the requirements for USGBC LEED® v4 for VOCs in flooring, (CA #1350). They also meets the requirements for the State of California High Performance Schools, (CHPS), and the CPSIA test for the safety of plastics in children's toys. RQT is FloorScore® certified by SCS Global Services.

Rikett's mission is to manufacture and sell the best quality products at the most competitive prices. We look forward to working with you on your new flooring projects.
